

We claim:

1. A bracket comprising a foot portion, a head portion, and a body portion connecting said foot and head portions, wherein said head portion comprises means for mounting an armrest in a selected one of a pivotal or a non-pivotal condition.

2. A bracket according to claim 1 wherein said head portion includes a first hole for receiving a first bolt to secure said armrest to said bracket in either said pivotal or non-pivotal conditions, a second hole for receiving a second bolt to secure said armrest in said non-pivotal condition, and a slot for receiving said second bolt alternatively to secure said armrest in said pivotal condition.

3. A bracket according to claim 2 having a channel formed therein configured to receive a cable.

4. A bracket according to claim 2 wherein said foot is symmetrical about a longitudinal axis of said bracket.

5. A bracket according to claim 2 wherein said head portion is cylindrical.
